Employee Workspace UI Enhancement Report

A consolidated record of the interface, mobile responsiveness, usability, and feedback improvements applied across the Employee Workspace.

Prepared 11 August 2026

Frontend update

Build verified

7

major interface areas improved

4

wide tables converted for mobile

2/2

lint and production build checks passed

1. Final Leave Approvals

- Status summary cards are now interactive and filter the displayed requests.
- The search toolbar remains visible while reviewing longer request lists.
- Excel export controls are contained in a compact expandable panel.
- The export continues to respect the active status, search, and date filters.
- Approval records change into readable cards on mobile screens.
- Existing approval, rejection, reapproval, hold, history, and export workflows remain unchanged.

2. User Management

- The large create/edit form is organized into Profile, Access, and Reporting sections.
- A section navigator makes long forms easier to scan.
- Required fields have visible indicators.
- Save and Cancel actions remain visible at the bottom while the form scrolls.
- Escape closes user-management dialogs when a submission is not running.
- User records use a responsive mobile card layout with usable action buttons.

3. Departments and reporting

- Department records now display as structured cards on mobile devices.
- The Managers / HR summary uses unique user accounts instead of adding the same assigned user once per department.
- Employee, Team Leader, Manager, HR, status, and action information stays available in the mobile layout.

4. Leave and reimbursement reports

- Leave Report tables now transform into labeled record cards on small screens.
- Reimbursement Report tables now transform into labeled record cards on small screens.
- Approval flows, final status, rejection reasons, finance status, and receipt links remain visible.
- Mobile users no longer need to navigate extremely wide tables horizontally.

5. Notifications

- Added All, Unread, Leave, Reimbursement, and Attendance filters.
- Each filter displays its matching notification count.
- Search presentation and keyboard focus feedback were improved.
- Notification category badges, unread accents, timestamps, and empty-filter messages were improved.
- The notification list and Mark Read action now adapt cleanly to mobile widths.

6. Dashboard and shared experience

- Reduced excess page-header height and improved the overall content hierarchy.
- Employee, Admin, Manager, HR, and Team Leader quick-action areas have clearer visual treatment.
- Quick-action buttons become full-width controls on mobile.
- Loading panels now include animated skeleton lines to show visible progress.
- Shared modal sizing, sticky actions, responsive forms, and mobile spacing were improved.

7. Preserved functionality

- The workspace theme selector and available color themes remain available.
- Leave Calendar Daily, Weekly, and Monthly views remain available.
- Absent – Uninformed recording and LOP behavior remain available to authorized users.
- No existing API contract or leave-approval workflow was changed by this UI pass.

Updated files

Shared UI	<code>src/components/ui/StatePanel.jsx</code> , <code>src/ui-system.css</code>

Verification

11 August 2026

Passed Frontend quality checks

- `npm run lint` completed successfully.
- `npm run build` completed successfully.
- `git diff --check` found no code-formatting errors.

The production build reports a non-blocking JavaScript bundle-size advisory. The application still builds successfully and the warning does not prevent deployment.
